https://docs.google.com/document/d/1XptIc_IG8kKzN7RDIF3JHbsIItYVNVQy_RuVScPbHE/edit

> Treacy Cantwell, "the Island Intuitive" (<https://www.lbihistoricalmuseum.org/treacy-cantwell>) will be back to help us connect with the cosmos.

Some of you will remember her fondly from prior Women Weekends.

>And Erika Leeuwenburgh--(<https://www.newharbinger.com/author/erika-leeuwenburgh/>) and https://www.amazon.com/s?k=Erika+Leeuwenburgh&i=stripbooks&crd=7QLZKCH5ILG&sprefix=erika+leeuwenburgh%2Cstripbooks%2C58&ref=nb_sb_noss--fresh from her one-woman art show, will lead our art workshop! Some of you will remember our pleasure in her creative touch! (read more below about why art *matters!*)

Please see next two pages for registration details and weekend schedule.

- Due with reservation—\$100;**
- Due Oct 1--\$150**
- Balance due on arrival. The good news!: No sales tax since this is a “special event”!**
- (*Gratuities not included)**

SEE BELOW FOR REGISTRATION INFO AND WEEKEND SCHEDULE ! THANKS.

To help us plan, please return the attached “preferences” form ASAP.

• Please email this form to MinervasBandB@gmail.com
(you may just copy and paste it into an email)

****Please return a *separate* sheet for each person, even if you're sharing a room. ****

Name _____ email _____

1. Do you have food restrictions? (Are you vegetarian? Also please advise about allergies, such as cheese, eggs, dairy, sugar, salt, nuts, gluten, etc.) _____

2. The yoga teacher would like to know about your prior experience with yoga.

3. What is your estimated arrival time? Afternoon _____ Evening _____ After 9 _____

4. Please indicate the services you will want:

Massage	yes _____	no _____	maybe _____
Manicure	yes _____	no _____	maybe _____
Pedicure	yes _____	no _____	maybe _____
Yoga	yes _____	no _____	maybe _____
Astrology reading	yes _____	no _____	maybe _____
Art class	yes _____	no _____	maybe _____

Schedule of Relaxation

Friday:

- **12 Check-in begins at 1 PM**
- **6:30-9 Supper:** Homemade soups, salad, bread, cheese & wine.
- **8:30 PM Yoga /meditation**

Saturday:

- **7:30 AM Yoga**
-
- **9:00-10:00 AM Breakfast**
- **10-5:** Various yummy pamperings. (Your individual schedule will be in your arrival packet.)
- **** Snacks and juice will be available all day.**
 - *****Saturday lunch on your own. ****
- **6:30 pm Supper:** scrumptious vegetarian and non-vegetarian fare

Sunday:

- **7:30 am Yoga**
- **8:30-10:00 AM Breakfast**
- **10:30-12:00 Art class**
- Check out early Sunday afternoon

And throughout the weekend, we will schedule your individual appointments for:

- **Massages:** with Jane Miller, back again with her magic hands!
- **Manicure and Pedicure will be at Red Sail salon in Surf City**
- **We're excited! Art Therapist Erika Leeuwenburgh will lead our art exercise on Sunday morning!**

Making Art Is a Uniquely Human Act:

One That Provides a Wellspring of Health Benefits

From drawing to gardening and woodworking, self-expression can lower stress, improve mood and increase self-confidence.

The act of creating art serves as exercise for the brain and is integral to physical and mental health.

When you think about the word “art,” what comes to mind? A child’s artwork pinned to the fridge? A favorite artist whose work always inspires? Abstract art that is hard to understand?

Each of these assumes that making art is something that other people do, such as children or “those with talent.”

However, as I explain in my book “[The Expressive Instinct](#),” art is intrinsic to human evolution and history. Just as sports or workouts exercise the body, creating art exercises the imagination and is essential to mental as well as physical well-being.

I am a [professor of art therapy](#) who studies how creative self-expression affects physical and emotional health. In our clinical research studies, my colleagues and I are finding that any form of creative self-expression – including drawing, painting, fiber arts, woodworking or photography – can [reduce stress](#), improve mood and increase self-confidence.

As a sickly child who needed to stay home from school a lot, I found that making art helped me cope. Today, creating art is my sanctuary. I use it as a sounding board to better understand myself and a way to recharge and learn from the challenges of life.

The uniquely human attribute of creativity

Although everyone has their own concept of what defines art, one thing is universally true: Creativity is a defining feature of the human species.

How so? Well, human brains are not computers processing data. They are biological prediction machines that perceive the environment through memories and the senses, with the capacity to [use that information to imagine](#) plausible future scenarios.

These inherent predictive and imaginative capacities are the wellspring of humanity's abilities to survive and thrive – because self-expression is a safety valve that helps us cope with uncertainty. No one truly knows the future; they must live each day not sure of what will happen tomorrow. Art can help us all practice this imaginative muscle in a useful way.

In our study examining brain activity while using virtual reality tools to create 3-D digital artwork, my team demonstrated that [creative expression is a natural state of being](#). The brain naturally uses fewer cognitive resources to be expressive and creative, compared with the [brain power needed to do a rote task](#) that requires conscious effort.

Seemingly ordinary everyday activities can provide opportunities to tap into one's natural creativity and imagination: whipping up a meal from leftovers, figuring out an alternate route to work, dancing a little jig in response to hearing a song, or planting and tending a garden.

We have repeatedly found in our studies that even a single session of real and honest self-expression can improve self-confidence and [reduce feelings of stress, anxiety and burnout](#).

This is partly because [creativity activates reward pathways](#) in the brain. Using our hands and bodies to express ourselves activates dopamine pathways and helps us feel good. Dopamine is a neural messenger that is associated with feeling a [sense of hope, accomplishment or reward](#). Our brains are wired to secrete [feel-good hormones whenever we move](#), create something or engage in any type of expressive activity.

Tapping into the creative resources within is [one of the most underrated seeds of well-being](#) in the world.

By comparison, bottling up or [denying these feelings can cause distress](#), anxiety and fear because we have not processed and expressed them. This is probably one of the reasons why every community around the world has its own creative and expressive practices. Even our ancestors in Indigenous communities all around the world intuitively knew that [self-expression was essential](#) to emotional health and social connection.

Being unable to share our lives, [keeping secrets](#) and feeling isolated and lonely tend [to worsen our health](#). To our brains, social isolation feels like a chronic disease because it interprets this loneliness and inability to express as a threat to survival.

Since creative expression can engage the senses, it can also be a body workout: a sensual as well as emotional and cognitive experience. Being active in expression – be it art, music, dance, drama, writing, culinary arts or working with nature – imparts a sense of confidence and hope that [challenges can be navigated and overcome](#).

The role of art therapy

Given the integral role of art in our lives, it makes sense that making art can help people manage transitions, adversity and trauma, such as the stresses of puberty, the death of a loved one or [experiencing a serious illness](#).

According to a global study, 1 in 2 people will experience a [mental-health-related challenge in their lifetime](#), whether from life's challenges, genetic predispositions or a combination of the two.

This is where art therapy can come in. Art therapy is [a regulated mental health profession](#) in which clinical psychotherapists with extensive clinical training offer psychotherapy to patients with diagnosed mental health needs.

The origins of art therapy go back to [attempts to treat soldiers struggling with post-traumatic stress](#) during the 20th century's two world wars. Today there is evidence that traumatic experiences tend to be stored as [sounds, images and physical sensations](#) in the brain. When someone [lacks the words](#) to process these experiences through traditional talk therapy, art therapy can provide an indirect way to express and externalize those feelings and memories.

One of art therapy's unique strengths is that it provides nonverbal ways of communicating, processing and eventually managing the symptoms of post-traumatic stress disorder, or PTSD. In fact, in a recent study, my team has found that a personal history of trauma is related to [how people react to evocative images](#). Images of distress and pain resonate with us when we have known similar kinds of distress ourselves. This implies that our life stories make us sensitized to distress in others and even personalize it more.

Creative self-expression is especially relevant in coping with trauma because it provides an outlet through which a person [can regain a sense of agency](#) and control.

How to bring creativity into daily life

For those new to exploring art as a creative pursuit or for well-being reasons, engaging in creative activities begins with letting go of unrealistic expectations. Being creative isn't about becoming a famous artist or even a mediocre one. It is about allowing ourselves to flex the creative muscle that we all have and enjoying all the sensory and emotional aspects of imagining.

Next, think about activities that made you feel free to explore when you were a child. Did you like singing, playing in the outdoors, dancing, making up pretend plays, or writing little tales? Allow yourself to indulge in any and all of these creative pursuits that made you feel relaxed and joyful.

A [cultural tradition](#), tinkering with electronics, making a gift for someone or simply paying attention to everyday beauty – any of these can be a creative activity. And just like any muscle, the more you exercise it, the stronger it becomes. Over time, you will notice yourself getting more confident and adventurous in your creative practices.

Whatever it is, make time for this creative pursuit every week – which is possibly the hardest step of them all. If it seems “unimportant” compared with the demands of daily life, such as work or family, try thinking of it as another form of sustenance.

Remember that creativity is just as critical to human health as [eating nutritious meals](#) or [getting exercise](#) and [good rest](#). So as the Latin saying goes: “Plene vivere.” Live fully.

Girija Kaimal is a Professor of Art Therapy Research at Drexel University.
